SUMMARY

Python engineer focused on LLM evaluation. At Microsoft, I benchmarked 4 production LLMs on financial tasks, analyzed their failure modes, and co-authored an arXiv whitepaper on the results. I use frontier models daily for coding and analysis, founded a small business, and do my best work under tight deadlines.

SKILLS

LLM & Evaluation: LLM Benchmarking, Failure Mode Analysis, Prompt Engineering, OpenAI API, LangChain, Hugging Face, BERT, NLP, PyTorch, TensorFlow/Keras, Scikit-Learn

Engineering: Python (Pandas, NumPy, PySpark), SQL, Django, Streamlit, ETL Pipelines, Git, AWS, GCP (BigQuery, Cloud Functions), Databricks

Analysis & Communication: Statistical Testing, Data Visualization, Tableau, Technical Writing, Presenting Findings to Technical and Non-Technical Audiences

EXPERIENCE

Microsoft | Data Scientist Intern (Full-time) **Aug 2024 – June 2025**

- Benchmarked 4 production LLMs on earnings call transcripts, measuring accuracy, bias, and failure modes on real financial tasks
- Turned results into recommendations that informed the Azure AI roadmap; co-authored an arXiv whitepaper and a Microsoft Tech Community post on the findings
- Built Python ETL pipelines on BigQuery and Cloud Functions to process unstructured financial text at scale, reducing manual review time by 40%
- Built Streamlit and Tableau dashboards to track model performance and presented findings to 100+ engineers and product managers

Execute Coaching | Founder **Dec 2024 – Present**

- Started and run a 1-on-1 training and nutrition business; coached 20+ clients and built the brand and client pipeline from scratch
- Built a Django website with a client login portal; track client data and adjust programs based on measured results

PwC | Data Assurance Intern **June 2023 – Aug 2023**

- Automated IT control evidence collection in Python, eliminating 20 hours per week of manual work
- Worked with Broadcom and eBay engineering teams to verify data integrity across distributed systems; authored 38 evidence documents

Live Nation | Merchandise Seller **May 2025 – Present**

- Generated \$500,000+ in personal sales, averaging \$10,000 per show day in high-volume, fast-paced event shifts

PROJECTS

Epicfin | Options Analytics Platform (Python) **2026**

- Built a trading analytics app with an options scanner and composite scoring, live market data via Alpaca, charting, and a trade journal
- Built an out-of-sample backtesting layer with significance testing and transaction-cost modeling so only statistically validated strategies surface ($p = 0.004$ across 188 symbols)

AI Resume-Job Matcher and Cover Letter Generator **Mar 2025**

- Deployed a Streamlit app combining BERT similarity matching with GPT-4/LangChain generation, PDF parsing, and Glassdoor enrichment

EDUCATION & AWARDS

Santa Clara University | M.S. Business Analytics, Applied ML and Data Systems Track (GPA 3.88) **June 2025**

Santa Clara University | B.S. Management Information Systems **June 2024**

- 1st Place, SCU Analytics Showdown (\$500, Jan 2025): built and evaluated an ML pipeline for Jiro-VE with 95% validation accuracy on 20K+ users
